4. FIRST-AID MEASURES

Eye Contact	:	Remove contact lenses, if present. Wash immediately with plenty of water for at least 30-60 minutes, opening the eyelids fully without rubbing eyes. Consult a physician if irritation persists.
Skin Contact	:	Remove contaminated clothing. Wash affected areas thoroughly with soap and water. Consult a physician in case of a lasting irritation.
Inhalation	:	Get medical advice immediately. Remove to fresh air, away from the accident scene and keep at rest in a position comfortable for breathing. If the subject stops breathing, administer artificial respiration.
Ingestion	:	Have the subject drink as much water as possible. Get medical advice immediately and show this SDS. Do not induce vomiting without medical advice.

5. FIRE-FIGHTING MEASURES

Flammability of the Product	:	Highly flammable liquid and vapour.
Products of Combustion	:	Decomposition products may include the following materials: Carbon dioxide Carbon monoxide Dioxins Phosgenes Hydrochloric acid Ketenes
Suitable	:	Dry powder and CO ₂ . For product loss or leakage that has not caught fire, water spray can be used to disperse flammable vapours and protect those trying to stem the leak.
Not Suitable	:	Do not use jets of water. Water is not effective for putting out fires but can be used to cool containers exposed to flames to prevent explosions.
Special Protective Equipment and precautions for fire-fighters	:	Normal fire fighting clothing i.e. fire kit (BS EN 469), gloves (BS EN 659) and boots (HO specification A29 and A30) in combination with self-contained open circuit positive pressure compressed air breathing apparatus (BS EN 137).

6. ACCIDENTAL RELEASE MEASURES

Personal Precautions, Protective Equipment and Emergency Procedures	:	Block the leakage if there is no hazard. Wear suitable protective equipment (including personal protective equipment referred to under Section 8 of the safety data sheet) to prevent any contamination of skin, eyes and personal clothing. Send away individuals who are not suitably equipped. Eliminate all sources of ignition (cigarettes, flames, sparks, etc.) from the leakage site.
Environmental Precautions	:	The product must not penetrate into the sewer system or come into contact with surface water or ground water.

Methods and materials for containment and cleaning up : Collect the leaked product into a suitable container. If the product is flammable, use explosion-proof equipment. Evaluate the compatibility of the container to be used, by checking section 10. Absorb the remainder with inert absorbent material. Make sure the leakage site is well aired. Contaminated material should be disposed of in compliance with the provisions set forth in point 13.

7. HANDLING AND STORAGE

Precautions for Safe Handling : Ensure that there is an adequate earthing system for the equipment and personnel. Avoid contact with eyes and skin. Do not breathe powders, vapours or mists. Do not eat, drink or smoke during use. Wash hands after use. Avoid leakage of the product into the environment.

Keep away from heat, sparks and naked flames; do not smoke or use matches or lighters. Without adequate ventilation, vapours may accumulate at ground level and, if ignited, catch fire even at a distance, with the danger of backfire. Avoid bunching of electrostatic charges. In order to avoid the risk of fires and explosions, never use compressed air when handling. Open containers with caution as they may be pressurised.

Conditions for Safe Storage : Store only in the original container. Store in a ventilated and dry place, far away from sources of ignition. Keep containers well sealed. Keep the product in clearly labelled containers. Avoid overheating. Avoid violent blows. Keep containers away from any incompatible materials, see section 10 for details.

Store in a well-ventilated place, keep far away from sources of heat, naked flames and sparks and other sources of ignition.

Exposure Controls

Respiratory Protection	:	Use only with adequate ventilation under engineered air control systems designed to prevent exceeding appropriate threshold value. For occasional use, where engineered air control is not feasible, use properly maintained and properly fitted approved respirator for organic solvent vapours. A dust mask does not provide protection against vapours.
Eye Protection	:	Use Tightly fitting safety goggles to avoid exposure to liquid splashes.
Hand Protection	:	Protective hands with category III work gloves.
Body Protection	:	Wear suitable coveralls to prevent exposure to the skin.
Hygiene Measures	:	Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Ensure that eyewash stations and safety showers are close to the workstation location.
